EDUCATION

Georgia Institute of Technology

Masters of Science - Computer Science

Atlanta, GA

Expected Graduation: May 2027

Carnegie Mellon University

Bachelor of Science - Statistics and Machine Learning / Business Administration

Pittsburgh, PA

Aug 2019 — May 2023

TECHNICAL SKILLS

Languages: Python, R, SQL (PostgreSQL), JavaScript, TypeScript, PHP, Java, HTML/CSS, C, C++

Frameworks & Libraries: React, Flask, Node.js, PyTorch, Tailwind CSS

Tools: AWS, GCP, Supabase, Docker, Git, FFmpeg, Jupyter/Colab, Claude Code

EXPERIENCE

Software Developer

Readeezy LLC via Develop for Good

Oct. 2024 – May 2025

New York, NY

- Built a settings dropdown from scratch in JavaScript and PHP — including audio playback speed controls and persistent preferences across sessions — expanding accessibility for neurodiverse and ESL learners on a platform serving 100+ daily users

Data Science Intern - Data Validation

IQVIA

May 2022 – May 2023

New York, NY

- Owned the full development lifecycle of an R script that automated a quality control process previously bottlenecked to a single subject matter expert, reducing manual review time by 50%+
- Independently researched and benchmarked multiple statistical methods for anomaly detection in supplier data, implementing a novel flagging approach not previously used in existing QC processes
- Automated cross-validation of two large-scale patient data streams using SQL, replacing an hour-long manual Excel reconciliation process with a script that completed in minutes
- Built weekly market research dashboards in R and Power BI tracking supplier trends and flagging outliers, contributing to recurring reporting workflows across a 12-person analyst team

PROJECTS

3D Adventure Game (GT Game Dev) | *Unity, C#*

- Served as the Git lead for a 5-person team — reviewed and merged all pull requests into main, resolved cross-branch merge conflicts, and enforced code consistency standards across independently developed game modules
- Implemented game mechanics in C including pressure-plate puzzles, physics-based hazards (slamming blocks, rolling projectiles), and player UI (health bar); delivered a complete 4-level game with boss fight validated through 10-person playtesting session

Compass - Geoguessr Training App | *React, TypeScript, Node.js, Supabase, PostgreSQL*

- Built a full-stack flashcard platform with community deck creation, drag-and-drop image upload, multi-sort pagination, and per-user like/save tracking across a Postgres schema
- Configured Supabase Auth with Google and GitHub OAuth, a first-login handle-picker flow, and JWT middleware with a 30-second server-side user cache to reduce redundant DB lookups
- Integrated Claude (Anthropic) vision API to batch-analyze uploaded images and auto-generate flashcard hints, cutting manual card-authoring time for the average deck

YouTube Lyric Video Generator | *Python, Flask, Tailwind, FFmpeg*

- Engineered a full-stack web app that converts any YouTube URL into a karaoke MP4 via a 6-stage pipeline: audio download, vocal separation, transcription, alignment, subtitle rendering, and video compositing
- Built a paste-lyrics alternate mode to align user-supplied text against Whisper word timestamps, enabling accurate karaoke sync without transcription
- Delivered a real-time progress UI using Flask SSE and Tailwind CSS, featuring a 4-step progress indicator, background theme selector, and vocal mix toggle
